

ASCII binary reference

Use this sheet to match uppercase letters to their binary ASCII codes. For a denary or hexadecimal clue, convert each character code to binary first, then look up the letter.

Letter	Binary ASCII code
A	01000001
B	01000010
C	01000011
D	01000100
E	01000101
F	01000110
G	01000111
H	01001000
I	01001001
J	01001010
K	01001011
L	01001100
M	01001101
N	01001110
O	01001111
P	01010000
Q	01010001
R	01010010
S	01010011
T	01010100
U	01010101
V	01010110
W	01010111
X	01011000
Y	01011001
Z	01011010

How to decode

Read one character code at a time. Keep the letters in the same order.

Binary place values: 128, 64, 32, 16, 8, 4, 2, 1.

Show your conversion working on a separate sheet.

Unicode seal lookup

U+1F680 = Rocket U+2605 = Star U+2665 = Heart

U+ labels a Unicode code point written in hexadecimal. It is not a UTF-8 byte sequence.

ASCII is a 7-bit character set with 128 codes. The binary values here use a leading zero to show 8 bits. Uppercase and lowercase letters have different codes.
